## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 13-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Zajakowski (6,705,517).

Zajakowski discloses an automated banking machine method comprising receiving a certificate through operation of the banking machine, authenticating at least one digital signature associated with the certificate through operation of the banking machine, configuring the banking machine responsive to the certificate and authentication of the at least one digital signature (col.9, line 30 to col.10, line 67 and fig.4-all); the certificate includes the digital signature, wherein the digital signature is authenticated responsive to a public key of a licensing authority (col.9, line 30 to col.10, line 67 and fig.4-all); the certificate corresponds to at least one software component authorized to be installed on the banking machine, and further comprising installing the at least one software component on the banking machine (col.9, line 30 to col.10, line 67 and fig.4-all); the certificate includes a plurality of sets of configuration rules each set corresponding to at least one of a plurality of automated banking machines, and

Art Unit: 3624

wherein the banking machine is enabled to be configured responsive to at least one set (col.9, line 30 to col.10, line 67; col.11, line 55 to col.12, line 55; and fig.4-all); the certificate further includes an expiration parameter, and further comprising determining through operation of the banking machine responsive to the expiration parameter that configuration of the software on the machine is not authorized and preventing configuration of software on the banking machine responsive to the determination (col.10, lines 15-35); the certificate includes an identification value unique to the banking machine (col.11, line 64 to col.12, line 16); determining through operation of the banking machine that the identification value corresponds to a hardware embedded identification value in the banking machine (col.11, line 64 to col.12, line 16); the certificate includes a terminal identification value, including associating the machine with the terminal identification value (col.11, line 64 to col.12, line 16); determining that the terminal identification value has changed and preventing the machine from performing at least one transaction function responsive to the determination (col.11, line 64 to col.12, line 16); retrieving the certificate from a licensing authority (col.9, line 30 to col.10, line 67 and fig.4-all); receiving the certificate from a server in operative connection with the banking machine (col.9, line 30 to col.10, line 67 and fig.4-all); and computer readable media bearing instructions which are operative to cause a computer in an automated banking machine to carry out the method steps of receiving a certificate through operation of the banking machine, authenticating at least one digital signature associated with the certificate through operation of the banking machine, and configuring the banking machine responsive to the certificate and authentication

Art Unit: 3624

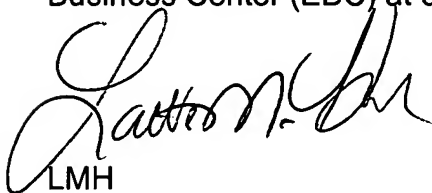

of the at least one digital signature (col.9, line 30 to col.10, line 67 and fig.4-all).
